

```
# Features
- list and details screens
- pull down to refresh for the list which refreshes the data
- loading state so user is aware that data is loaded
- offline usage - if fetched, the data is available in offline mode
(e.g. Airplane mode)
- you can use libraries
```

```
# Requirements
```

```
## End-point to fetch data
```

```
- https://api2.binance.com/api/v3/ticker/24hr
```

```
## List item structure:
```

```
Line 1: "symbol" (priceChangePercent)
```

```
Line 2: bidPrice / askPrice
```

```
### Example
```

```
ETHBTC 5.67%
```

```
bid/ask: 0.07741400/0.07741500
```

```
## Details item structure
```

```
list all data in the following format:
```

```
- line 1: property name, e.g. "symbol"
```

```
- line 2: property value, e.g. ETHBTC
```

```
* repeat this for all properties
```

```
### Example
```

```
==
```

```
Symbol
```

```
ETHBTC
```

```
--
```

```
Price change
```

```
0.00415900
```

```
--
```

```
Price change percent
```

```
5.677
```

```
==
```

```
Example API response
```

```
```json
```

```
